

DATASET DOCUMENTATION

Project Overview

This project combines three macroeconomic datasets focused on Kenya's public finance and debt structure. The datasets collectively provide insights into government revenue collection, expenditure allocation, public debt accumulation, and domestic borrowing mechanisms.

The integrated analysis enables the development of a Fiscal & Debt Sustainability Intelligence Dashboard capable of monitoring fiscal deficits, debt growth, borrowing structures, and financial risk indicators over time.

The project simulates real-world analytics commonly performed by:

- Central Banks
 - National Treasuries
 - Economic Planning Units
 - Sovereign Risk Analysts
 - Financial Policy Institutions
-

DATASETS DESCRIPTION

1. Public Debt Dataset

Description

This dataset contains information about Kenya's total public debt over time. It captures the government's debt obligations divided into:

- Domestic Debt
- External Debt
- Total Public Debt

Key Purpose

The dataset helps analyze:

- Debt accumulation trends
- Debt sustainability
- Government borrowing dependence
- Domestic vs external financing exposure

Potential Fields

- Year / Period
- Domestic Debt
- External Debt
- Total Public Debt
- Debt Growth Rate

Business Value

This dataset enables analysts to:

- Monitor national debt growth
 - Evaluate fiscal sustainability
 - Assess sovereign financial risk
 - Understand financing dependency patterns
-

2. Domestic Debt by Instrument Dataset

Description

This dataset breaks down Kenya's domestic debt into specific borrowing instruments used by the government to raise funds internally.

Common Debt Instruments

- Treasury Bills
- Treasury Bonds
- Government Stocks
- Overdrafts
- Commercial Advances

Key Purpose

The dataset helps identify:

- Which instruments dominate government borrowing
- Short-term vs long-term borrowing behavior

- Financing structure trends
- Market reliance patterns

Potential Fields

- Year / Period
- Debt Instrument
- Amount Borrowed
- Share Contribution %
- Instrument Growth

Business Value

This dataset enables:

- Debt structure analysis
 - Financing concentration analysis
 - Market liquidity insights
 - Risk exposure monitoring
-

3. Revenue and Expenditure Dataset

Description

This dataset contains government revenue collections and expenditure allocations over time.

It represents the fiscal performance of the government and forms the foundation for deficit analysis.

Revenue Components

- Tax Revenue
- Non-Tax Revenue
- Grants
- Other Government Income

Expenditure Components

- Recurrent Expenditure

- Development Expenditure
- Interest Payments
- Transfers

Key Purpose

The dataset helps analyze:

- Fiscal deficits/surpluses
- Government spending trends
- Revenue performance
- Budget sustainability

Potential Fields

- Year / Period
- Total Revenue
- Total Expenditure
- Recurrent Expenditure
- Development Expenditure
- Fiscal Balance

Business Value

This dataset enables:

- Fiscal policy monitoring
- Budget performance analysis
- Government spending efficiency analysis
- Deficit trend evaluation

COMMON DENOMINATOR ACROSS THE DATASETS

The three datasets are connected through Kenya's fiscal management cycle.

The relationship follows this flow:

Government Revenue → Government Expenditure → Fiscal Deficit → Government Borrowing
→ Public Debt Growth

When expenditure exceeds revenue, the government finances the deficit through domestic and external borrowing, leading to public debt accumulation.

This makes the datasets highly suitable for:

- Fiscal sustainability analysis
 - Public finance intelligence
 - Economic risk analytics
 - Sovereign debt monitoring
-

PROJECT OBJECTIVE

The main objective of this project is to build a comprehensive Fiscal & Debt Sustainability Intelligence Dashboard that provides decision-makers with insights into:

- Government fiscal performance
- Debt growth trends
- Borrowing structure
- Fiscal risk exposure
- Debt sustainability indicators

The dashboard will support data-driven analysis of Kenya's public financial health and long-term fiscal stability.
